

## INFORMED CONSENT

Client Name: \_\_\_\_\_ Date: \_\_\_\_\_

I consent to and authorize Tattoo Undo and Veins Too and their Certified Laser Technicians to perform multiple laser treatments and any other related services on me. The procedure that I plan on having utilizes laser technology for the removal of tattoos, spider veins, age spots, scars, acne and skin resurfacing.

As a patient you have the right to be informed about your treatment so that you may make the decision whether to proceed with laser treatment or decline after knowing the risks involved. This disclosure is to help to inform you prior to your consent for treatment about the risks, side effects and possible complications related to laser treatment.

The following risks or problems may occur with laser procedures:

1. Rarely, infection, scarring, textural changes, allergic reactions, burns, blisters, vessel swelling, pigmentary changes and unforeseen complications may happen and can last up to many months, years or be permanent.
2. Textural changes and scarring in the skin could have occurred during the application of the tattoo and can be permanent.
3. Infection following treatment is unusual, but fungal and viral infections can occur. This applies to both individuals with a past history of herpes simplex virus infections. Should any type of skin infection occur, additional treatments or medical antibiotics may be necessary.
4. Purpura (epidermal bruising), swelling, stinging, pain, blistering, redness or pinpoint bleeding can occur following treatment.
5. Allergic reactions upon dissemination, the pigments can induce a severe allergic reaction that can occur with each successive treatment.
6. A topical anesthetic may be applied before treatment to reduce discomfort during the procedure. Allergic reaction to this anesthetic is rare, but is a possibility. Skin may get red or swollen from anesthetic.
7. Compliance with the aftercare guidelines is crucial for healing and the prevention of scarring and hyper-pigmentation. Proper care to treatment area especially restriction to sun exposure is critical while receiving laser treatments.
8. Hyper-pigmentation (skin darkening) and Hypo-pigmentation (skin lightening) is a common side effect, occurring in approximately 50% of patients. It is usually transient and resolves within 1-12 months. This can be permanent in rare cases.

Occasionally, unforeseen mechanical problems may occur and your appointment will need to be rescheduled. We will make every effort to notify you prior to your arrival to the office. Please be understanding if we cause you any inconvenience.

### ACKNOWLEDGEMENT:

By providing my signature below, I acknowledge that I have read and understand that all laser treatment results are different and may or may not work on each person including myself. My body chemistry and compliance with after care directions will determine my results. I understand that there are no guarantees. I feel that I have been adequately informed regarding my laser treatment. I hereby freely consent to laser treatment and I am willing to have it performed on me. My questions regarding the procedure have been answered satisfactorily. I understand the procedure and accept the risk. I authorize Tattoo Undo and Veins Too to perform multiple laser treatments and any other related services on me. I hereby release Tattoo Undo and Veins Too and their employees from all liabilities associated with any laser procedures. I also consent to any photos/film taken of me to be used to record my progress and for marketing purposes. I understand that exposure of my eyes to the laser light could harm my vision. I must keep the eye protection goggles on at all times while the laser is on.
